Getting started with XRAI Glass® on the AR One

Get started

Step one
Download the app for free

Download the XRAI Glass® app for free on either your Android or iOS device.[1] Once downloaded, sign in using your social login and complete the short onboarding.

Download now

[1] XRAI Glass requires Android 11+ or iOS 13.7+

🔵 **Y**ou'll need to turn your Bluetooth on when first connecting the glasses to your mobile device.

🔋 You might need to charge your glasses before turning them on for the first time.

Signing in to the XRAI® Glass app

Step two
Update your glasses

To ensure you have the best experience right from day one, we recommend updating your glasses as soon as they arrive. This ensures you have the latest features, improved performance, and enhanced security.

How to update

1. Go to **https://link.xrai.glass/ar-one** on a device you can connect your glasses to - in most cases, this will be a desktop computer with a USB to USB-C cable.
2. Connect your glasses with the online updater tool.
3. Scroll down the options on your right until you reach the **Update Firmware section**. There are also some other options to manually adjust the brightness and time zone of your glasses.
4. Once connected, you can click update now on the firmware to ensure you have the latest version of the software running your glasses.

☐ Automatic

Connect to Wi-Fi*

Connect your glasses to your current Wi-Fi network

Wi-Fi SSID:	N/A
Status:	Disconnected
Speed:	N/A
Signal Strength:	N/A

Connect to Wi-Fi

Step three
Get your pairing code

After updating, restart your glasses and wait for the XRAI Glass® app to open automatically. Once open, you should see a unique 6 digit code in front of your eyes. If not, you can reach this screen by pressing the function button 3 times in a row.

Welcome to XRAI Glass
Enter the code below on your phone to pair devices

Pair with device
DX7GH5

Press 3 times +

Hold for 3-5 seconds ⏻

Step four
Pair your devices

Head back to your mobile device and click the ⎗ **pairing button** in the top right corner of your screen.

Next, select the Leion Hey glasses from the **Nearby devices** menu. Remember, you'll need to have your Bluetooth turned on to discover nearby devices.
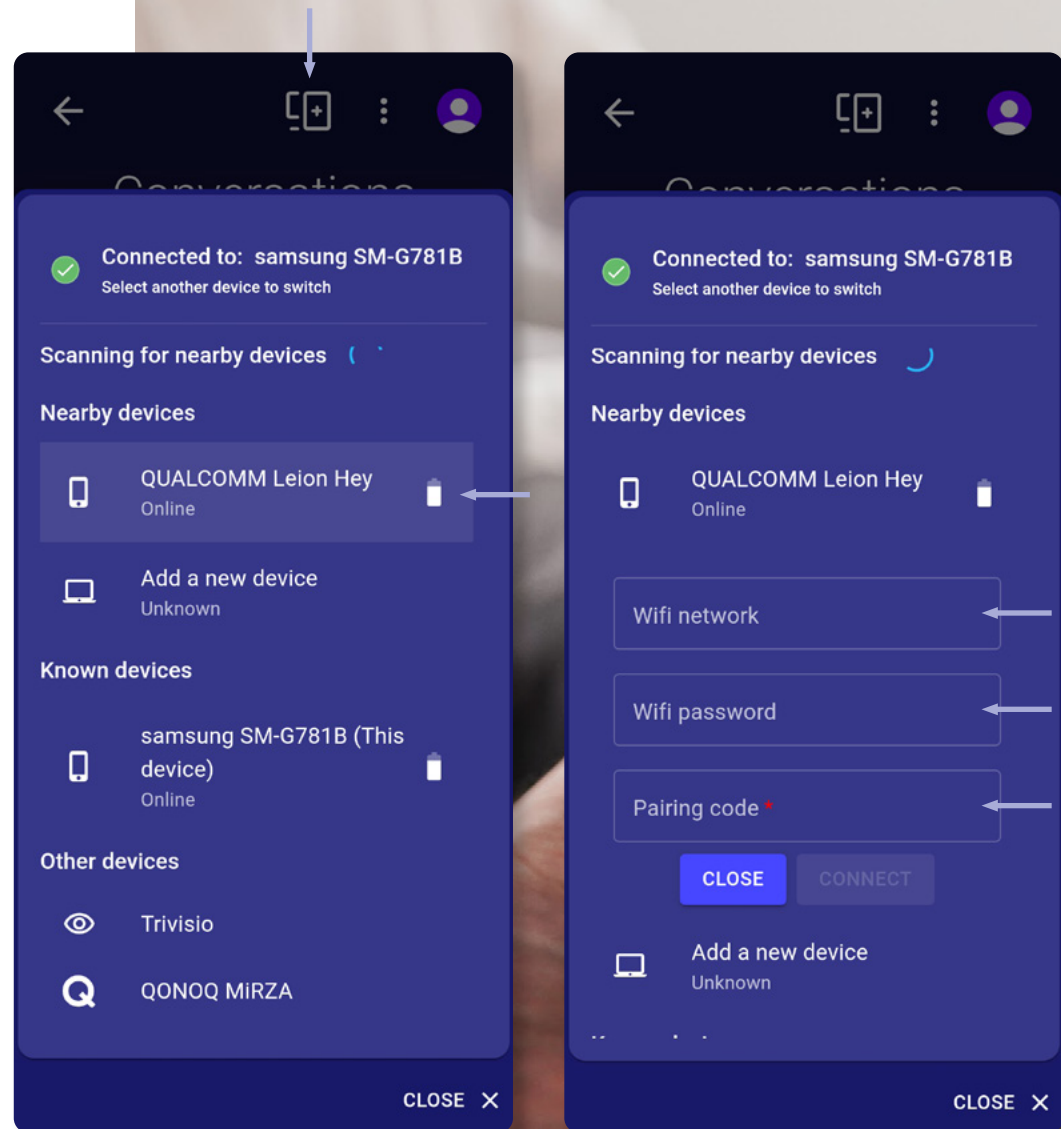

Finally, enter your WiFi details and pairing code to connect the glasses to your device.[1] You can find your pairing code in your glasses from the previous step. Once connected, you'll be able to use your mobile device to control the settings of the XRAI Glass® app within your glasses.

[1] After device pairing is completed, you'll be able to turn off your Bluetooth.

Using your glasses on the go?
Simply disconnect from the WiFi, make sure you're connected to your 4G/5G network, then set up a hotspot on your iOS or Android device. You can then use your hotspot details to pair your devices.

8. Adjustable nose pads
9. USB-C port

Power button (1)
Single tap = sleep / wake device

Function button (2)
Single tap = start / pause* subtitles
Double tap = stop subtitles
Triple tap = pairing screen

Pausing subtitles will not stop the app.

Make sure to stop your subtitles to

put your glasses into sleep mode.

# Prescriptions
How to fit custom lenses

Your glasses come complete with a pair of blank clip-on lenses that can be customized to your prescription. Simply send the clip-on lenses to your optician or optical specialist to have them tailored to you.

Installation

1. Remove the cover plate located on the inside of your glasses, just above the nose pads.
2. Align your prescription lens insert with the opening slot, with the clip facing away from you. Then simply push in - you should hear a click once attached. To remove, grab either side of the lenses, then pull backwards until the lenses are detached.

Not sure where to go?
We've partnered with **Lensology**, who provide custom lens inserts for augmented reality glasses (including ours). Simply visit their website, select your glasses, input your prescription, and have them shipped globally straight to your door.

Transcription
Lightning-fast subtitles

Using the latest cloud-enhanced transcription engines, our app transforms spoken words into written text effortlessly, providing you with a convenient way to transcribe your live audio recordings on the go.

Try it out

1. Start a new conversation and click on the quick settings menu in the bottom right of your screen.
2. If you're having a conversation with just the one speaker, try enabling **Noise cancellation** to help improve the accuracy of your subtitles.
3. By default, your app will use your mobile device as your audio source. If you've got a Bluetooth microphone, try connecting it to your device and changing the **Selected audio source** in the app.
4. If you're using a compatible pair of augmented reality glasses, try enabling the **Minimal interface** to change the interface to focus more on your conversation.

What is cloud-enhanced transcription?

Languages
## 140+ languages and dialects

Picture yourself attending an event where the keynote speaker is speaking in a different language - or even a different dialect. With XRAI Glass®, you can instantly translate over 140+ languages and dialects, all in real-time.

Try it out

1. Select the language icon from the bottom bar.
2. From here, you can select the spoken language by clicking on the circle next to the language. You can also use the heart to add a language to your list of favorites.
3. Next, simply move to the **To** tab and select the language you'd like your subtitles to appear in. By default, your app will be set to No translation. After you're done, simply click off of the language menu to return to your conversation.

How to translate

AI Assistant
Powered by ChatGPT

We've integrated ChatGPT into our app to deliver a deeper and more meaningful user experience. You can ask XRAI to change your speaker name, summarize your conversation, or even help you find the perfect recipe for dinner.

Try it out

1. Open up your settings by clicking on the user icon in the top right hand corner of the home screen.
2. Next, scroll down to find the **Conversational AI** option and toggle it on.
3. You'll then need to input your personal OpenAI GPT key to activate your AI assistant. To get your key, simply visit **openai.com** and register for a free account. Once registered, you'll be able to find your key in your user settings.

How to set up the AI Assistant

Meet themes
Your subtitles, your way

With XRAI Glass, it's all about you. Change the spacing for words, letters, lines, margins, and more - on your phone or in a pair of smart glasses.

Try it out

1. Open up your quick settings menu and select **Colors**. From here, try selecting a new theme color.
2. Next, select **Fonts**. From here, try changing your font size (this works on both your mobile device and in a pair of smart glasses).
3. Finally, select **Spacing**. From here, you can change everything from your word, letter, and line spacing, to even your width and margin.
